Fundraising Luncheon Benefiting Children with Pediatric Feeding Disorders

Over 900 individuals expected to attend event hosted by Feeding Matters

(Scottsdale, AZ) – Feeding Matters will host the 4th Annual Community Luncheon at the Arizona Biltmore on September 28, 2016. The organization’s flagship event, presented by Jaburg Wilk, Attorneys at Law, and chaired by Bill and Judy Schubert, is free to attend and showcases the groundbreaking work being done by Feeding Matters to further the field of pediatric feeding disorders.

In 2006, Feeding Matters was founded to further advancements in the evaluation and treatment of children with pediatric feeding disorders. More than a million infants and children struggle with the fundamentals of feeding – including more than 21,500 Arizona children. When unable to eat, children cannot thrive cognitively, physically, socially, or emotionally – and are at high-risk for developing a disability. With limited treatment options or published research on long-term effects, families have restricted options for information and support.

Guests at the luncheon will hear first-hand from children and families who are achieving success because of Feeding Matters’ work, and will have the opportunity to contribute vital funding that enables Feeding Matters to improve the lives of children struggling with pediatric feeding disorders. Attendance is free of charge, and 100% of funds raised during the luncheon will support the programs and services of Feeding Matters.

About Feeding Matters

Feeding Matters is bringing pediatric feeding struggles to the forefront so infants and children are identified early, families' voices are heard, and medical professionals are equipped to deliver collaborative care.
