

Home Feeding Therapy Tools

Having easy access to tools during teletherapy will make sessions run more smoothly. I have listed some common household items in the chef's "menu" below that can be used for a variety of feeding activities. It is not necessary to have every item on the list. It will help me, when planning our sessions, to know what you do have and what you can place in a storage container, shelf or other space that is nearby during sessions.

Additional tools, as applicable

Chewy tubes

Vibration tools
